

TECHNICAL SPECIFICATIONS

Type	2-1 COMBI machine for hair removal & Tattoo removal.
Wavelength	808nm standard, optional 755nm, 1064nm or all 3 waves combined
Function	Remove unwanted hair and tattoo ink
Spot Size	12x20mm standard- Other sizes optional before purchase
Machine Cooling	Triple Cooling Technology: Air cooling, liquid cooling, Thermal Electric Cooling
Water Filtration	Double water filter system
Handle Cooling	TEC Cooling combined with sapphire contact cooling.
Laser bars	12 best quality laser bars imported from USA COHERENT
Other Special Details	Optimum Energy- Less energy loss and more results. Double filters to keep water quality.
Control Panel	12" 4K Touch Display with Intelligent™ Pulse
Language	English Standard. Others optional
Power	1200W
Electrical Voltage	AC220V±10%,10A;50HZ/ AC110V±10%20A,60HZ

ELEVATE YOUR INCOME

*Based on a 6-day working week over 52 weeks and an average treatment price of £100

INTRODUCING THE

LUMI | COMBI

The LUMI | COMBI 2 in 1 system is a groundbreaking innovation in the field of aesthetic treatments, offering a dual-functionality platform that combines laser hair removal reduction and Picosecond tattoo removal. This advanced technology caters to the growing demand for effective, safe, and versatile cosmetic solutions in both personal and professional settings.

The laser hair removal component of the LUMI | COMBI 2 in 1 utilizes cutting-edge laser technology to target and permanently reduce unwanted hair. This system is designed to be effective for all hair and skin types and tones, providing a customizable approach to meet individual patient needs. The technology works by emitting laser light that is absorbed by the pigment in the hair follicles, effectively disabling future hair growth. This results in smoother skin and long-lasting hair reduction with minimal discomfort and downtime.

We understand that one size doesn't fit all, and at Lumi, we are dedicated to meeting our customers' unique needs. That's why LUMI | LASER features different consumer options for detachable spot sizes including super fine facial tip, tailored to provide personalized treatment options.

Picosecond Tattoo Removal

The Picosecond tattoo removal feature of the LUMI | COMBI 2 in 1 leverage ultra-short laser pulse to shatter tattoo ink particles without causing significant damage to the surrounding skin. This technology is highly effective in removing a broad spectrum of tattoo colours and types, including stubborn and deep-ink tattoos. The rapid pulse delivery breaks down ink into smaller particles, which are then naturally eliminated by the body's immune system. This method ensures faster, more efficient treatments with fewer sessions required compared to traditional tattoo removal techniques.

ALEX (755NM)

The Alexandrite wavelength, at 755 nm, is highly effective for laser hair removal, especially on lighter skin tones and finer hair. It penetrates deeply into the skin, targeting hair follicles with precision for efficient and long-lasting results.

DIODE (808NM)

The diode wavelength, usually between 800 and 810 nanometres (nm), is highly effective in targeting melanin in hair follicles. This precision ensures efficient hair removal across a wide range of skin tones and hair types, making it a preferred choice for comfortable and effective treatments.

YAG (1064NM)

The Nd:YAG wavelength, at 1064 nanometres (nm), is highly effective for laser treatments on all skin types, including darker skin tones. Its longer wavelength allows deeper penetration into the skin, targeting hair follicles and vascular lesions with precision while minimizing the risk of skin damage. This makes the Nd:YAG laser an excellent choice for various dermatological applications, including hair removal and treatment of vascular conditions.

The LUMI | COMBI 2 in 1 system stands out for its versatility, offering two advanced treatments in a single, compact device. This not only reduces the need for multiple machines, saving space and costs for clinics and salons, but also enhances the efficiency and convenience of delivering high-demand services. Practitioners benefit from an intuitive interface and adjustable settings, ensuring a tailored approach for each patient's unique needs.
